

Width: 140cm Width: 82cm Height: 92cm Weight: 75kg

Maximum load: 200kg
Starting weight: 11kg

- > Easy adjustment of the supports height for the thighs.
- > Studied design to look for correct angle that allows the accurate development of the calf muscles.
- > High durability stainless screws
- Ultra solid steel chassis. Combination of two kind of tubes: 76mm diameter circle tube and 100x50mm oval tube; both with 3mm width. TIG welding in all the union points.
- The grips and supports are composed of a doubke handle with negative inclination for the arms, a vertical handle to hold securely the bar and two inclined pedals to ensure the correct traction with the feets.

- > Fireproof upholstery made in hi-density polyfoam for more confort and reliability.
- > High precision industrial ball bearings to ensure smooth operation and protection against corrosion.
- > Elastic adjustments that allow the user to adapt easily and accurately to the machine
- > Rubber protections on the supports to avoid scracthes.
- Anti-slip aluminum grips for the best feeling during exercise and the greatest guarantee for durability.
- > Diameter of the grips: 38cm
- > Due to the proportional parametric design, the machine offers a wide range that allows the correct use of the machine to any kind of people.
